Bret:

Sorry, yes we have been working the issue. We have found some PRPs that are willing and able to take over the remainder of the the site work but they want to go through the TCEQ VCP. The PRPs are aware of our costs. We have alot of people on TCEQ and EPA that are working together to make this happen.

We may not need to go further on the SI portion. We need to coordinate with TCEQ to see how the process is going to work.

Call me if you want to talk.

Subject: CES Environmental Status

Gary,

I spoke with Stephen Ellis of TCEQ today and found out that the CES Environmental site may be moving into TCEQ's VCP. Are you aware of this?

I know that if the site does move into the TCEQ VCP, the PRPs will still be liable for costs incurred by EPA. I just was surprised and wondered if you were aware.
